

Cutting and chamfering disc
for the treatment of plastic

Cutting and chamfering disc for the treatment of plastic

The new cutting and chamfering disc DCCI Combi has been especially developed for the treatment of plastic pipes. The galvanized cutting edge and the diamond-coated chamfering enable constant and clean cutting and chamfering at the same time. Moreover, a cutting depth stop serves as an additional aid.

Application
2 steps in one: The DCCI Combi enables simultaneous cutting and chamfering of plastic pipes.

+ **Constant and high cutting speed** thanks to the galvanized cutting edge

+ **Clean chamfering** through an advanced diamond coating

+ **Simultaneous cutting and chamfering** for an efficient work progress
